

Claims

- [c1] The output voltage of a power converter is regulated by causing the input current of the said converter to be proportional to its output current and inversely proportional to its input voltage.
- [c2] The output current of a power converter is regulated by causing the input current of the said converter to be proportional to its output voltage and inversely proportional to its input voltage.
- [c3] An adaptive method to regulate the output voltage of a power converter by causing the input current of the said converter to be proportional to its output current.
- [c4] An adaptive method to regulate the output current of a power converter by causing the input current of the said converter to be proportional to its output voltage.
